overview.tsx

```
import { Marketplace, LiveEditor, Talent } from 'thezift'
```

Buy, sell and build with production-ready UI components.

TheZift is a developer platform where you can shop ready-to-use website templates and component kits, try them in a live sandbox before you commit, sharpen your skills with coding challenges, and hire vetted developers — all in one place.

Browse Marketplace → Start Selling

100+	50K+	4	1-click
READY TEMPLATES & KITS	DEVELOPER COMMUNITY	FRAMEWORKS SUPPORTED	IMPORT & DOWNLOAD

```
const offerings = [ ... ]
```

Four products, one platform

TheZift brings together everything a frontend developer needs to ship faster — a components marketplace, a live sandbox, practice problems, and a talent network — instead of stitching together separate tools.

marketplace.tsx

Marketplace

Browse and buy production-ready website templates, React components and full UI kits. Source code included, with instant download and lifetime updates on every purchase.

live-editor.tsx

Live Editor

Preview and try components in a sandboxed live editor before you buy. Import what you like directly into your project with one click, from verified authors only.

practice.tsx

Coding Practice

Work through real-world coding challenges and interactive tutorials to sharpen problem-solving skills and build a portfolio while you learn.

talent-hub.tsx

Talent Hub

Post job listings and connect with skilled developers from a community of 50,000+ professionals, or get discovered for freelance and full-time work.

```
// framework & stack support
```

React | Next.js | Vue | Tailwind CSS | Responsive by default

```
$ thezift install hero-section --framework=react
✓ component downloaded — source included, ready to edit
// no attribution required, lifetime updates on future releases
```

```
export default function WhyTheZift()
```

Built to remove repetitive frontend work

Common interface elements — buttons, forms, nav menus, dashboards — get rebuilt on every project. TheZift exists so developers can reuse high-quality building blocks and spend their time on the parts of the product that are actually new.

01

Production-ready

Every listing is built to be dropped into a real project, not a design mockup that still needs engineering.

02

Try before you buy

The live editor lets you test a component's behaviour in the browser before it's part of your codebase.

03

Verified authors

Contributors are verified, so quality and support stay consistent across the catalogue.

04

Lifetime updates

Purchases include ongoing updates, so a component doesn't go stale as frameworks evolve.

05

Earn from your code

Developers can list their own templates, components and full-stack projects and start earning from work they've already done.

06

One connected platform

Marketplace, practice, and hiring live together, so growth on one side of the platform feeds the others.

FOR DEVELOPERS

Ship UI faster

Skip rebuilding common interface patterns from scratch — buy, preview, and import what you need, or sell your own components to earn from your existing work.

FOR BUSINESSES

Hire with confidence

Post job listings and reach a community of 50,000+ developers directly on the platform where they already build and sell.

FOR LEARNERS

Learn by building

Use real-world coding challenges and interactive tutorials to build practical skill and a portfolio at the same time.

> *"TheZift addresses the challenge of repetitive interface coding by giving developers ready-to-use frontend assets that integrate easily into modern development environments and frameworks."*
>
> — Platform launch announcement, IssueWire, May 2026

```
function getInTouch() {"{"}
```

Ready to stop rebuilding the same UI twice?

Explore the marketplace, drop a component into the live editor, or reach out directly — the team is based in Noida and easy to reach.
